

Syllabus Assignment
SCI 1001

Due date: _____

1. Print out a current copy of your schedule. Then gather up all of the syllabi for the courses you are registered for.
2. Read through each one, and locate as many of the items from the list as possible on each syllabus. Underline the important details, write notes or whatever seems helpful to find the information later. Put them in a location where you will be sure to find them.
3. Write a one page journal entry about what you learned by doing this. Do you understand better what a syllabus is for? Did you learn anything about your other courses that you hadn't realized?
